phosphoprotein phosphatase (EC 3.1.3.16) ABII - Arabidopsis thaliana
Nylternate names: protein F20B18.190
C;Speas: Arabidopsis thaliana (mouse-ear cress)
C;Date: 30-Apr-1999 #sequence_revision 30-Apr-1999 #text_change 08-Oct-1999
C;Accession: T04263; A54588
C;Accession: T04263; A54588
A;Revan, M.; Rose, M.; Hempel, S.; Entian, K.D.; Hoheisel, J.; Mewes, H.W.; Mayer, K.F.X
A;Reternce number: 215263
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          probable exported protein STY4756 [imported] - Salmonella enterica subsp. enterica serovar probable exported protein STY4756 [imported] - Salmonella enterica serovar Typhi A;Note: this species has also been called Salmonella typhi C;Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002 C;Accession: AH1053 F;Parkhill, J.; Dougan, G.; James, K.D.; Thomson, N.R.; Pickard, D.; Wain, J.; Churcher, th. Herzyk P., Hubbard R.E.; Using a model of the Using experimental information to produce a model of the length transmembrane domain of the ion channel phospholamban."; Biophys. J. 74:1203-1214(1998).
-!- FUNCTION: Phospholamban has been postulated to regulate the activity of the calcium pump of cardiac sarcoplasmic reticulum.-!- SUBUNIT: Homopentamer.
                                                                                                                                                                                             -:- SUBCELLULAR LOCATION: Membrane.
-:- TISSUB SPECIFICITY: Heart.
-:- PTM: Phosphorylated in response to beta-adrenergic stimulation.
-:- SIMILARITY: Belongs to the phospholamban family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Rattus norvegicus (Rat), and Oryctolagus cuniculus (Rabbit).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Circ. Res., 71:1021-1030(1992).

-1- FUNCTION: Phospholamban has been postulated to regulate the carcivity of the calcium pump of cardiac sarcoplasmic reticulum.

-1- SUBGNIT: Homopentamer.

-1- SUBGLELULAR LOCATION: Membrane.

-1- TISSUE SPECIFICITY: Heart.

Phosphorylation of serine 16 and threonine 17 in response to beta-adrenergic stimulation."; J. Biol. Chem. 264:11468-11474(1989).
                                                                                                                                                                                                                                                                                                                                                                                                                                             Biochem. J. 262:353-356(1989).
-!- FUNCTION: Phospholamban has been postulated to regulate the activity of the calcium pump of cardiac sarcoplasmic reticulum.
-!- SUBDNAT: Homopentamer.
-!- SUBCELLULAR LOCATION: Membrane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- TISSUE SPECIFICITY: Heart.
-!- PTM: Phosphorylated in response to beta-adrenergic stimulation.
-!- SIMILARITY: Belongs to the phospholamban family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Phosphorylation, Acetylation, 3D-structure. 31 CYTOPLASMIC (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                96.0%; Score 72; DB 1; Length 52; 93.8%; Pred.                                                                                      "Complete genome sequence and comparative analysis of the industrial microorganism Streptomyces avermitilis.";

Nat. Biotechnol. 21:526-531(2003).

-!-FUNCTION: This protein is located at the 30S-50S ribosomal subunit interface and may play a role in the structure and function of the aminoacyl-tRNA binding site (By similarity).

-!-SIMILARITY: Belongs to the L19P family of ribosomal proteins.

Submitted (FEB-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: This protein is located at the 30S-50S ribosomal subunit interface and may play a role in the structure and function of the aminoacyl-tRNA binding site (By similarity).
-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A.

-1 - SUBGELLULAR LOCATION: Cytoplasmic.
-1 - SIMILARITY: Belongs to class-II aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                   Gaps

"A complete sequence of T. tengcongensis genome.";
Genome Res. 12:689-700(2002)
-!- FUNCTION: This protein is located at the 30S-50S ribosomal subunit interface and may play a role in the structure and function of the aminoacyl-tRNA binding site (By similarity).
-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

-!- CATALYTIC ACTIVITY: Phosphatidyl-L-serine =
phosphatidylethanolamine + CO(2).
-!- COFACTOR: Pyruvoyl group (By similarity).
-!- SIMILARITY: Belongs to the phosphatidylserine decarboxylase family. Subfamily 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     50.7%; Score 38; DB 1; Length 299; 43.8%; Pred. Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Hydrolyzes diadenosine 5',5'''-Pl,P4-tetraphosphate to yield ADP (By similarity)
-!- CATALYTIC ACTIVITY: P(1),P(4)-bis(5'-adenosyl)tetraphosphate + H(2)O = 2 ADP.
-!- SIMILARITY: Belongs to the Ap4A hydrolase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Setubal J.C., Kitajima J.P.; "Comparison of the genomes of two Xanthomonas pathogens with differing host specificities."; Nature 417:459-463(2002).
                                                                                                                                                                    -1- FUNCTION: The sigma factor is an initiation factor that promotes attachment of the RNA polymerase to specific initiation sites and then is released. This is the primary sigma-factor of this bacteria (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 STRAIN=AS-3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Salvini M., Bini E., Santucci A., Batistoni R.;
"H4 histone in the macronucleus of Blepharisma japonicum (Protozoa,
Ciliophora, Heterotrichida).";
FEMS Microbiol. Lett. 149:93-98 (1997)
-!- FUNCTION: Histone H4, along with histone H3, plays a central role
in nucleosome formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- SUBUNIT: The nucleosome is an octamer containing two molecules each of H2A, H2B, H3 and H4. The octamer wraps approximately 146
-!- SUBUNIT: The nucleosome is an octamer containing two molecules each of H2A, H2B, H3 and H4. The octamer wraps approximately 146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PRINTS, PROD623, HISTONEH4.

                                                                                                                                                                                                                                                                                                                                              Genome Res. 13:1572-1579(2003).
-!- FUNCTION: This protein is located at the 30S-50S ribosomal subunit interface and may play a role in the structure and function of the aminoacy1-tRNA binding site (By similarity).
-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Submitted (MAY-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: This protein is located at the 30S-50S ribosomal subunit
interface and may play a role in the structure and function of the
aminoacyl-tRNA binding site (By similarity).
-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0; Gaps

-!- FUNCTION: The sigma factor is an initiation factor that promotes attachment of the RNA polymerase to specific initiation sites and then is released. This is the primary sigma-factor of this bacteria (By similarity).

-!- SIMILARITY: Belongs to the sigma-70 factor family.
                                                                                                                                                  Xanthomonas campestris (pv. campestris).

Proteins that associate with the core dimer include three families of regulatory subunits B (the R2/B/PR55/B55, R3/Br /PR72/PR130/PR59 and R5/B/B56 families), the 48 kDa variable regulatory subunit, viral proteins, SUBCELLULAR LOCATION: Cytoplasmic.

TISSUE SPECIFICITY: Widely expressed with the highest expression in heart and skeletal muscle.
                                                                                                                        Zolnierowicz S., van Hoof C., Andjelkovic N., Cron P., Stevens I., Merlevede W., Goris J., Hemmirgs B.A.;

Development 121:3487.3487(1995).

-!- FUNCTION: May play a role in the signal transduction pathway mediated by multiple Wnt genes. Plays a role in dorsal axis formation and in neural induction.

-!- FUNCTION: Capplesmit (Potential).

-!- SUBCELULIAR LOCATION: Cytoplasmic (Potential).

-!- TISSUE SPECIFICITY: Ubiquitous protein found equally distributed in both animal vegetal and dorsal-ventral directions.

-!- DEVELOPMENTAL STAGE: Maternal gene detected in different developmental stages being most abundant in eggs.

-!- SIMILARITY: Belongs to the DSH family.

-!- SIMILARITY: Contains 1 DEP domain.

-!- SIMILARITY: Contains 1 DEX domain.
Segment polarity protein dishevelled homolog DVL-2 (Dishevelled-2) (DSH homolog 2) (Xdsh).
                   (DŠH homolog 2) (Kásh).
Kanopus laevis (African clawed frog).

-!- SUBJUNT: In chloroplasts, the RNA polymerase is composed of four subunits: alpha, beta, beta', and beta',
-!- SUBJULIAR LOCATION: Chloroplast.
-!- SIMILARITY: Belongs to the RNA polymerase beta chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                  -i- FUNCTION: Positive controlling element of amiE, the gene for alightatic amidase. Acts as a transcriptional antitermination factor. It is thought to allow RNA polymerase read through a rhoindependent transcription terminator between the amiE promoter and
          "Crystal structure and induction mechanism of AmiC-AmiR: a ligand-regulated transcription antitermination complex."; EMBO J. 18:5175-5186(1999).

Phospholamban; PLB; human; sarcoplasmic reticulum Ca 2+ ATPase; SERCAZa; cardiant; cardiadomyocyte; transport peptide; penetratin; cardiac peptide; contractilin; cardiac contractility; inhibitor; cardiac disease; treatment; heart failure; myocardial dysfunction; recombinant peptide;

Penetratin-based recombinant phospholamban peptide, TAT-PLB.

(first entry)

29-AUG-2000

AAY71012;

AAY71012 standard; peptide; 35 AA.

RESULT 2 AAY71012

5..15 /note= "Corresponds to denatured human immunodeficiency virus (HIV) TAT protein"

Location/Qualifiers

Region

Region

Human immunodeficiency virus.

Homo sapiens

HIV; TAT protein

/note= "Corresponds to human phospholamban (PLB) amino terminal peptide"

```
Phospholamban; PLB; human; sarcoplasmic reticulum Ca 2+ ATPase; SERCA2a; cardiant; cardianycoxpet; transport peptide; penetratin; cargo peptide; contractilin; cardiac contractility; inhibitor; cardiac disease; treatment; heart failure; myocardial dysfunction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The patent discloses a method for the treatment of heart failure, using small peptide complexes and recombinant proteins, that induces phospholamban (PLB) deficiency and inhibits the inheraction between PLB and sarcoplasmic reticulum (2 + ATPase (SERCAZA) within cardiomycoytes. The peptide complex comprises of transport peptide like penetratin and cargo peptide complex comprises of transport peptide like penetratin and cargo peptide selected from mutant PLB, native PLB or antibody against PLB protein (contractilin). Penetratin-PLB peptide functions as a dominant negative inhibitor of PLB-SERCAZA interaction, enhances cardiac contractility and reduces blood pressure. This method is useful for the treatment of cardiac disease e.g. heart failure and myocardial dysfunction. The present amino acid sequence is the cargo peptide from human PLB amino terminal residues 1-16. It could be derived from any segment of wild type or mutant PLB pentent. The cargo peptide is linked and the cargo peptide is linked and the cargo peptide is linked and the cargo peptide is linked and the cargo peptide is linked the cargo peptide is linked and the cargo peptide is linked.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The patent discloses a method for the treatment of heart failure, using small peptide complexes and recombinant proteins, that induces phospholamban [PIB] deficiency and inhibits the interaction between PLB and sarcoplasmic reticulum Ca 2+ ATPase (SERCAZa) within cardiomycoytes. The peptide complex comprises of transport peptide like penetratin and cargo peptide complex comprises of transport peptide like penetratin and cargo peptide selected from muteant PIB, native PLB or antibody against blb protein (contractilin). Penetratin-PLB peptide functions as a dominant negative inhibitor of PLB-SERCAZa interaction, enhances cardiac contractility and reduces blood pressure. This method is useful for the treatment of cardiac disease e.g. heart failure and myocardial dysfunction. The present sequence is the penetratin-based recombinant peptide TAT-PLB, comprising the amino terminal end of human PLB native (HIV), TAT protein. Penetratin is a class of peptides, with translocating properties having the ability to carry hydrophilic compounds across the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
